RailTop - Info - Service 20091214

Oberriet, 14.12.2009

Dear RailTop customers

We are happy to announce you the completion of the SBB parcel-sorting van type D2-D2. The following versions are ready for delivery:

- Item # 31715: SBB parcel-sorting van with translucent windows

- Item # 31716: SBB parcel-sorting van with barred windows and different road number.

The release of this model finally allows the formation of SBB fast and express goods trains on your layout. As special documentation in favour of the railway modeller we have assembled some rare photos of the wagon in operation and showing the formation of fast goods trains in our prospectus on the D2-D2. Please ask for it at your specialised dealer. It is meant for collection purposes. We plan to issue a useful loose-leaf folder for all our prospectuses next year.

We regret very much that the realization of these models by our new partners in China has suffered a considerable delay, among others because the quality standards set by RailTop had to be respected by all means. However, it was worth while waiting. For instance, the utmost complex short coupling mechanism between the two bodies – allowing a radius of 358 mm – was a particular challenge for the technicians.

Some of our customers in countries not neighbouring Switzerland cannot buy the model in a specialised shop. These customers are given the possibility to order this model in our Internet shop from about December 22, 2009 on.

Our show-room at the office in Oberriet/Switzerland is also open between Christmas and New Year Monday through Friday from 1 p.m. to 5 p.m. Our visitors will receive a small surprise.

We wish you a merry Christmas and all the best for the New Year.

Sincerely Yours,
RailTop GmbH
Robert Doll
